

Chemical Peels

What is it: Jessner peels contain resorcinol, salicylic and lactic acid to exfoliate the surface layers of skin. This helps to reduce acne stains, melasma, and hyperpigmentation.

What to expect: This is a facial with little downtime taking 10-15 minutes to perform. There can be mild to moderate redness and peeling lasting 2-3 days. A series of 4 peels is recommended performed once every four weeks.

Postcare involves gentle cleansing, moisturizers, and sunblock.

Caution

Patients with an allergy to salicylates (aspirin)

Pregnant or breastfeeding women

Patients under the age of 12

Cost* \$150 for 1; \$480 for a series of 4

*HST not included
