

Radiofrequency Microneedling (Infini™)

Treatment involves insertion of microneedles into the skin eliciting a wound response to increase collagen and elastic tissue in deeper skin layers. This helps to lift scars and firm tissues to reduce wrinkles. The radiofrequency pulse activates cells in the skin to produce more of these wound repair factors.

Indications: Acne scarring; lower face & neck tightening; wrinkle reduction; stretch marks. This is one of the most important advances for acne scarring and is a cornerstone of treatment for that condition.

What to expect: your skin is prepared and numbing cream applied for 30-40 minutes. Treatment pulses are delivered with a handpiece on the skin. Usually this feels like a light pinch. Full face treatment takes about 10-15 minutes.

Immediately afterward, the skin is red and may feel warm. This resolves within a few hours. You will be advised about gentle skin care and skin healing creams.

Potential side effects include prolonged redness, scarring or needle imprinting.

Maintenance: For the best results, we normally recommend a series of four treatments, one every 4 weeks. Skin care products to enhance your skin tone and texture can help maintain the improvement.

Fees*: Single \$700; multiple \$550 per treatment
